Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

J. Clin. Invest. 52:1276-1281(1973).
-!- MISCELLANBOUS: The major amyloid protein appears to be identical
with the Bence Jones protein isolated from the same patient.
-!- MISCELLANBOUS: This protein was isolated from the urine of a
patient with plasma cell dyscrasia and amyloidosis.
-!- MISCELLANBOUS: The C region of this chain has the INV (1,2)

```
The invention describes an antibody comprising a ligand mimetic, which differentially binds to an activated alphavbeta 3 integrin receptor differentially produced on a cell in a merestatic state compared to a similar, non-metastatic cell, and does not bind to a non-activated alphavbeta 3 integrin receptor. Also described are: a pharmaceutical composition comprising the antibody; treating a disease state in a mammal; a cell line comprising a tumor cell variant with a metastatic homing propensity to a target tissue; producing an antibody phage population amammal by treatment with a cancer therapeutic; inducing or enhancing an immune response to an antigen in a mammal detecting tumor cell surface in a mammal by treatment with a cancer therapeutic; inducing or enhancing an immune response to an antigen in a mammal by treatment with cells liable to undergo metastasis associated with a disease state; an isolated Bc-12 or Bc-15 control of a second tidentifying cells liable to undergo metastasis associated with a disease state; an isolated Bc-12 or Bc-15 polymucleotide comprising a nucleotide sequence that has at least 90% percent identity to a fully defined 802 or 752 bp sequence (SEQ ID NO. 1 or 3) given in the specification; an isolated polypeptide comprising a nucleotide sequence that has at least 90% comprising the polymucleotide in which the nucleotide sequence identity to SEQ ID NO. 1 or 3, or shares a biological function with Bc-12 or Bc-15; a vector comprising the polymucleotide in which the nucleotide sequence of the polymucleotide in a host cell; a host cell comprising the polymucleotide in a respect of the cell; and comprising the polymucleotide in a host cell; and expression vector comprising the polymucleotide or progeny of the cell; and expression in expression of the polymucleotide or progeny of the cell; and expression cell the polymucleotide in a host cell; and expression in expression of treating neoplastic disease, solid tumor, hematological malignancy, treating neoplastic disease, solid tumor, hema
      specifically binds to activated alphavbeta3 integrin receptor, useful for treating, e.g. neoplastic disease, solid tumor, leukemia, or benign or malignant breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polycystic ovary syndrome, endometrial polyps, prostate cancer, prostatic hypertrophy, pituitary cancer, adenomyosis, adenocarcinomas, meningioma, melanoma, bone cancer, multiple myeloma, CNS cancer, glioma, or astroblastoma. This is the amino acid sequence of single chain variable fragment antibody BC-12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cancer, uterine leiomyomas, ovarian cancer, endometrial cancer,

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLVS) polypeptides. BLVS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antitheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLVS. The antibodies bind to BLVS and so may be used to detect and quantitate the presence of BLVS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLVS. They may also be administered to treat diseases associated with aberrant BLVS expression and activity such as cancer, immune, and autoimmune disorders and addiseases, e.g. systemic lupus errythematosus, rheumatoid architis, immunodeficiency (e.g. common variable immunodeficiency (VID) and

The BLyS gene has been mapped to Chromosome 1343 and encodes a protein that is a member of the tumour chromosome 1343 and encodes a protein that is a member of the tumour necrosis factor superfamily and induces both in vivo and in vitro B cell proliferation and differentiation. Specifically, it refers to single chain antibody molecules (GCFWs) derived, preferably, from the variable compart thereof, of either human, murine, rat or monkey BLyS. The fragment thereof, of either human, murine, rat or monkey BLyS. The creep invention refers to the use of such antibodies in various methods for the detection, diagnosis and prognosis of diseases related to the aberrant expression or inappropriate function of BLyS or its receptor. As such, these compositions are useful for identifying immune disorders including myasthenia gravis and multiple sclerosis, inflammatory disorders e.g. asthma and rheumatoid arthritis, infectious diseases such as AIDS and proliferative disorders including leukaemia, carcinoma and lymphoma. Accordingly, they can be described as exhibiting various activities such as antirheumatic, antiallergic and cytostatic. This attinflammatory, antiasthmatic, antiallergic and cytostatic. This cinvention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format of directely from WIPO at ftp.wipo.int/published otc_sequences.

The invention relates to a novel antibody that immunospecifically binds to a B Lymphocyte Stimulator protein. The protein comprises an amino acid sequence that is 85% identical to the VH domain of any one of the singlechain variable fragments (scrys) of SEQ ID NOS. 1-2128, and/or an amino acid sequence that is at least 85% identical to the VL domain of any one of the scrys of SEQ ID NOS. 1-2128. The invention further comprises: an isolated nucleic acid molecule encoding the antibody; an isolated cell ine that expresses the antibody; a method for detecting the expression of a B Lymphocyte Stimulator protein; a method for diagnosing an cutoimmune disease or a B cell cancer; and a method for treating, preventing, or ameliorating an autoimmune disease or a B cell cancer. The autoimmune disease or a B cell cancer. The autoimmune disease or a B cell cancer. The autoimmune disease or a B cell cancer. The autoimmune disease or a B cell cancer. The autoimmune disease is systemic lupus erythematosus or rheumatoid arthritis. It can also be used for diagnosing, treating, and preventing immune disease (e.g. multiple collaboration of alsoness, myssthenia argaryis, or Hashimoto's disease) inflammatory, and alsoness or allowing and preventing immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           disorders (e.g. asthma or allergic disorders), infectious diseases (e.g. AIDS), and proliferative disorders (e.g. leukemia, carcinoma, or AIDS), and proliferative disorders (e.g. leukemia, carcinoma, or polymphoma). This sequence represents a single-chain variable fragment polypeptide that immunospecifically binds to a B Lymphocyte Stimulator protein of the invention. Note: This sequence is not shown in the specification. It has been electronically downloaded from the USPTO
                                                             New antibodies that immunospecifically binds to B Lymphocyte Stimulator protein, useful for diagnosing, treating, or preventing autoimmune disease, e.g. systemic lupus erythematosus or rheumatoid arthritis, or E

prostate-specific antigen (PSA) and anti-chymotrypein (ACT), and has an affinity for the complex which is at least 10 fold higher than the affinity for either PSA or ACT alone. The antibody is used in diagnostic assays to detect PSA-ACT in serum samples from patients. The levels of PSA-ACT complex increase in patients suffering from prostate cancer compared to the levels in patients with benign or no growths in the prostate. Therefore detection of PSA in complex with ACT is useful for the early detection of prostate tumours, by distinguishing between benign of mailgnant conditions of the prostate as well as for the management of patients with prostate cancer, such as the disclosure of metastasis and the monitoring of the PSA levels after treatment. The antibodies may also burification of PSA-ACT unlike prior art antibodies which bind to PSA-ACT alone. Diagnostic assays using the antibodies are 1 MAQVQLVQSGAEVKKPGASVKVSCKASGYTPSNYGITWVRQAPGQGLEWMGWIN--NGNT 1 MAQVQLVQSGAEVKKPGASVKVSCKASGYTFTSYGISWVRQAPGQGLEWMGWISAYNGNT 59 HYAQKEQCRVTMTTDTSTSTAYMELRSLRSDDTAVYYCARDPRGDDEPYWGQGTLVTVSS examples of antibodies directed against PSA-ACT. The present sequence represents the amino acid sequence of antibody BIOC7 Gaps more accurate in diagnosing prostate cancer as they only detect the intact complex of PSA-ACT. Sequences AAV21880-884 represent specific The invention relates to an antibody that binds a complex between New anti-complex antibody useful for diagnosing prostate cancer. 9.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel antibody sequences, which acts against lesioned tissue. Also claimed is a method (M1) for isolating polynucleotide encoding the antibodies, which involves (a) isolating B cells that is infiltrated into lesioned tissue, and (b) acquiring polynucleotide that encodes an antibody from the isolated B cells. The antibodies are useful for treating cancer lesions, arteriosclerosis, inflammatory disease or autoimmune disease. The present sequence was used

The recombinant antibody has two peptide fragments of the S19 antibody and the fragments are joined together by a linker. The recombinant monoclonal antibodies are useful in a passive immunity composition for contraception as they inhibit the ability of sperm to fertilize an egg. The antibodies may be used e.g. as an active ingredient of a spermistatic agent, or as a component of a spermicidal contraceptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   179 GQSPRRLIYKVSNRDSGVPDRFSGSGSGTDFTLKISRVEAEDIGVYYCMQGTHWPPRTFG 238

diabetes and tumors, comprises using peptides that bind to insulin or insulin-like growth factor receptors. Pillutla R, Brandt J; Ostergaard S, Mandecki WS;

The invention relates to a method of modulating insulin activity in mammalian cells by administering a peptide that binds the insulin receptor (IR). A composition containing a peptide, optionally expressed from gene therapy vectors, that binds to Site 1 of IR and an insulin agonist are useful for treating diabetes. Also, peptides that are antagonists of the insulin-like growth factor (IGF-1) receptor are useful for treating insulin-like growth factor (IGF)-sensitive tumours (e.g. of prostate and breast) and diabetic retinopathy, while IGF-1 receptor agonists are useful for treating neurological diseases, including stroke and diabetic neuropathy. The peptides are also useful in screening for compounds that bind to IR or IGF-1 receptor, potential therapeutics and research reagents. AAU88034-AAU99957 represent IR and/or IGF-1 receptor-binding peptides and related amino acid sequences of the invention

WPI; 2005-445149/45. N-PSDB; AEA44227 variants like Anti-Mpl antibodies including antihuman Mpl antibody and variants l genetically-engineered antihuman Mpl diabody, applicable in drug compositions for use in chemotherapy of thrombocytopenia and other diseases associated with Mpl mutation.

Claim 29; SEQ ID NO 293; 106pp; Japanese.

The invention describes an antibody is a single-chain polypeptide with TPO (thrombopoietin) receptor (Mpl)-binding activity that contains the 2 TPO (thrombopoietin) receptor (Mpl)-binding activity that contains the 2 CE heavy-chain variable regions and 2 light-chain variable regions. Also described are: a chimeric antibody for binding with human Mpl; an antibody for binding with human Mpl and monkey Mpl; antibodies with binding activity for soluble Mpl; antibodies with binding activity for soluble Mpl; antibodies containing a heavy-chain variable region with CDR (complementary-determinant regions 1, 2 and 3); antibodies containing heavy and light-chain variable regions with CDR 1, and 3 selected from the already specified groups in 18 combinations; antibodies containing a heavy-chain variable region with RR1, 2, 3 and 4; antibodies containing a light-chain variable region with RR1, 2, 3 and 4; epitope-recognizing antibodies the antibodies with the heavy and light-chain variable region RR1, 2, 3 and 4; epitope-recognizing antibodies the antibodies with the heavy and light-chain variable regions and amino acid sequences;

have equivalent activity as such antibodies; vectors containing these polynucleotides; host cells carrying such polynucleotides or vectors; and drug compositions containing these antibodies. The antibodies are applicable in drug compositions for use in chemotherapy of thrombocytopenia and other diseases associated with Mp1 mutation such as congenital amegakaryocytic thrombocytopenia. These antibodies can include antihuman Mp1 antibody and variants like genetically-engineered antihuman Mp1 diabody and (humanized) antihuman Mp1 sc(Fv)2. Such antibodies are soluble to enhance binding ability. The diabody and sc(Fv)2 show high agoinstic activity against antihuman Mp1 antibody, such activity of which is comparable or superior to that of the natural ligand, human TPO. This is the amino acid sequence of a single chain antibody human FPO. This
antibodies that can recognize the an amino acid moiety in human Mpl from positions 26-271, polymucleotides encoding these antibodies; polymucleotides hybridizable with the polymucleotides that encode the antibodies under stringent conditions and the antibodies encoded by which

The invention relates to remedies for thrombocytopenia comprising an sc(Fv)2 (a double single chain antibody comprising 2 heavy chains and 2 light chains, often referred to as a diabody) with binding activity coward TPO (thrombopoietin) receptor (Mpl, myeloproliferative leukemia virus oncogene) as active ingredient. The antibodies comprise human framework regions (FR) grafted to mouse complementarity region (CDR).

Also included are remedies for thrombocytopenia containing antibodies (thrombocytopenia containing antibodies for thrombocytopenia containing antibodies (which have a heavy-chain variable region with CDR1, CDR2 and CDR3 that have amino acid sequences of AEBC02043-AEBC02045, respectively, and/or a light-chain variable region with CDR1, CDR2 and CDR3 that have amino acid sequences of AEBC02044-AEBC02046, respectively, and/or a light-chain and/or insertion of some amino acids), remedies for thrombocytopenia containing antibodies that can recognize amino acid sites of human Mpl and/or insertion of some amino acids), remedies for thrombocytopenia containing antibodies that can recognize amino acid sites of human Mpl cremedies. The remedies are for the treatment of thrombocytopenia containing antibodies are for the treatment of thrombocytopenia continity against antihuman Mpl antibody, and the activity is comparable or superior to that of human TPO (thrombopoietin) which is a natural cativity against antihuman Mpl antibody, and the activity is comparable or superior to that of human TPO (thrombopoietin) which is a natural cativity against antihuman Mpl antibody, and the activity is comparable or superior to that of human TPO (thrombopoietin) which is a natural can extremely effective because they have high against antihuman Mpl antibody, and the activity and antibody (or superior that of human TPO (thrombopoietin) which is a natural cativity against antihuman mpl (thrombopoietin) antibody (or diabody) derived from the mouse anti-Mpl antibody et printed from the mouse anti-Mpl antibody et printed from the m

New scFv Bc-12 or Bc-15 antibody comprises ligand mimetic, which specifically binds to activated alphavbeta3 integrin receptor, useful for treating, e.g. neoplastic disease, solid tumor, leukemia, or benign or malignant breast cancer.

Claim 3; SEQ ID NO 4; 109pp; English

The invention describes an antibody comprising a ligand mimetic, which specifically binds to an activated alphavheta 3 integrin receptor differentially produced on a cell in a metastatic state compared to a similar, non-metastatic cell, and does not bind to a non-activated alphavheta 3 integrin receptor. Also described are: a pharmaccutical composition comprising the antibody; treating a disease state in a mammal composition comprising a tumor cell variant with a metastatic homing propensity to a target tissue; producing an antibody phage population having affinity for a tumor cell target; detecting uncor cells in a mammal by treatment with a cancer therapeutic; inducing or enhancing an maning a matigen in a mammal; detecting or enhancing an expense to an antigen in a mammal; detecting or enhancing an surface receptor on a metastatic tumor cell surface in a mammalian tissue surface receptor on a metastatic tumor cell surface in a mammalian tissue sample; interfering with cells liable to undergo metastasis associated with a disease state; identifying cells liable to undergo metastasis associated with a disease state; an isolated Bc-12 or Bc-15 polymucleotide comprising a nucleotide sequence that has at least 90% percent identity to a fully defined 802 or 752 bp sequence (SEQ ID NO. 1 or 3) or shares a biological function with Bc-12 or Bc-15; a vector comprising the polymucleotide in which the nucleotide sequence of the polymucleotide in which the nucleotide sequence that comprising the polymucleotide in which the mucleotide sequence of the polymucleotide in which the mucleotide sequence of the polymucleotide in which he mucleotide sequence of the polymucleotide in which he mucleotide sequence of the polymucleotide in which he mucleotide sequence of the polymucleotide in which he mucleotide sequence of the polymucleotide in which he mucleotide sequence of the polymucleotide or progeny of the cell; and determining anti-metastic cativity of a test compound in a mammal. The antibody is useful for comprising the cell The invention describes an antibody comprising a ligand mimetic, which

The invention describes an antibody is a single-chain polypeptide with TPO (thrombopoietin) receptor (Mpl) binding activity that contains the 2 TPO (thrombopoietin) receptor (Mpl) binding activity that contains the 2 Deavy-Chain variable regions and 2 light-chain variable regions. Also described are: a chimeric antibody for binding with Mpl; an antibody for binding with Mpl; an antibody for binding with Mpl; an antibody for binding with human Mpl and monkey Mpl; antibodies with binding activity for soluble Mpl; antibodies with binding activity for soluble Mpl; antibodies with binding activity for soluble Mpl; antibodies with Dinding activity for soluble Mpl; antibodies containing heavy and light-chain variable regions with CDR 12 and 3; antibodies containing a leavy-chain variable regions with CDR 12 and 3; antibodies containing a heavy-chain variable regions with CDR 12, and 4; antibodies containing a heavy-chain variable regions with RPI; 2, 3 and 4; antibodies containing a neavy-chain variable regions with RPI; 2, 3 and 4; antibodies that can recognize the antibodies with the heavy and light-chain variable regions and amino acid sequences; antibodies that can recognize the an amino acid sequences; antibodies under stringent conditions and the antibodies; polymucleotides hybridizable with the polymucleotides encoded by which have equivalent activity as such antibodies; and polymucleotides host such antibodies; vectors containing these polymucleotides in the antibodies; and polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides on the polymucleotides o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            drug compositions containing these antibodies. The antibodies are applicable in drug compositions for use in chemcherapy of thrombocytopenia and other diseases associated with Mpl mutation such as congenital amegakaryocytic thrombocytopenia. These antibodies can include antihuman Mpl antibody and variants like genetically-engineered antihuman Mpl diabody and (humanized) antihuman Mpl sc(Fv)2. Such antibodies are soluble to enhance binding ability. The diabody and sc(Fv)2 show high agonistic activity against antihuman Mpl antibody, such activity of which is comparable or superior to that of the natural ligand, human TPO. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the amino acid sequence of a single chain antibody hVB22B u2-wz5

Anti-Mpl sc(Fv)2 antibody hVB22B u2-wz4.

Antibody; myeloproliferative leukemia virus oncogene; Mpl;

```
The invention relates to remedies for thrombocytopenia comprising an sc(Fv)2 (a double single chain antibody comprising 2 heavy chains and 2 c(Fv)2 (a double single chain antibody comprising 2 heavy chains and 2 tight chains, often referred to as a diabody) with binding activity y coward TPO (thrombopoietin) receptor (MpJ, myeloproliferative leukemia virus oncogene) as active ingredient. The antibodies comprise human cortaining antibodies (comprise nortaining antibodies comprise human containing antibodies (which have a last can bind with human Mpl and monkey Mpl, remedies for thrombocytopenia containing antibodies (which have a complements of the carbot region with CDR1, CDR2 and CDR3 that have amino acid sequences of ABE02043-AEE02045, respectively, and/or a light-chain cortaining antibodies (which have a managed or a NEE02046-AEE02048, or antibodies having amino acid sequences of AEE02048 for modification by substitution, deletion, addition and/or insertion of some amino acids, remedies for thrombocytopenia containing antibodies that can recognize amino acid sites of human Mpl from positions 126-274, and agents for increasing platelets containing containing antibodies are for the treatment of thrombocytopenia cortaining are extremely effective because they have high agonistic artibodies are extremely effective because they have high agonistic activity against antihuman Mpl antibody, and the activity is a natural cortaining the present sequence represents a humanized single chain antibody cortained from the mouse anti-Mpl antibody (WB22B). Note: The sequence data for this patent did not form part of remedies cortained in electron format directly form WPD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Remedies for thrombopenia as well as agents for increasing number of platelets comprises e.g. Mpl-recognizing antibodies with high agonistic activity against antihuman Mpl antibody.

The invention describes an antibody is a single-chain polypeptide with TPO (thrombopoietin) receptor (Mp1)-binding activity that contains the 2 meavy-chain variable regions and 2 light-chain variable regions. Also described are: a chimeric antibody for binding with Mp1; an antibody for binding with Mp1; an antibody for binding with human Mp1 and concise with squistic activity for soluble Mp1; antibodies with binding activity for soluble Mp1; antibodies containing a heavy-chain variable regions with CDR 12 and 3); antibodies containing a light-chain variable region with CDR 12 and 3); antibodies containing a light-chain variable region with CDR 12 and 3); antibodies containing a light-chain variable region with CDR 12 and 3; antibodies containing a light-chain variable region with CDR 12 and 4; antibodies containing a light-chain variable region with CDR 12. and 4; antibodies containing a light-chain variable region with RPI, 2; 3 and 4; antibodies containing a light-chain variable region with CDR 12. antibodies that can recognize the antibodies with the heavy and light-chain variable regions and amino acid sequences; antibodies that can recognize the amino acid molety in human Mp1 from positions 26-274; polymucleotides encoding these antibodies encoded by which cantibodies under stringent conditions and the antibodies encoded by which have equivalent activity as such antibodies; vectors containing these

polynucleotides; host cells carrying such polynucleotides or vectors; and drug compositions containing these antibodies. The antibodies are applicable in drug compositions for use in chemotherapy of the applicable in the drug compositions are specially of the drug compositions are drug compositions and other diseases associated with Mp1 mutation such as congenital amegakaryocytic thrombocytopenia. These antibodies can include antihuman Mp1 antibody and variants like genetically-engineered antihuman Mp1 diabody and (humanized) antihuman Mp1 sc(FV)2. Such antibodies are soluble to enhance binding ability. The diabody and sc(FV)2 show high agonistic activity against antihuman Mp1 antibody, such activity of which is comparable or superior to that of the natural ligand, human TPO. This is the amino acid sequence of a single chain antibody hVB22B p-z.

Remedies for thrombopenia as well as agents for increasing number of platelets comprises e.g. Mpl-recognizing antibodies with high agonistic activity against antihuman Mpl antibody.

Example 3; SEQ ID NO 61; 71pp; Japanese

The invention relates to remedies for thrombocytopenia comprising an sc(Fv)2 (a double single chain antibody comprising 2 heavy chains and 2 light chains, often referred to as a diabody) with binding activity toward TPO (thrombopoietin) receptor (Mpl, myeloproliferative leukemia virus oncogene) as active ingredient. The antibodies comprise human cramework regions (FR) grafted to mouse complementarity region (CDR). Also included are remedies for thrombocytopenia containing antibodies (chat can bind with human Mpl and monkey Mpl, remedies for thrombocytopenia containing antibodies (which have a heavy-chain variable region with CDR1, CDR2 and CDR3 that have amino acid sequences of AEB02043-AEB02045, respectively, and/or a light-chain variable region with CDR2 and CDR3 that have amino acid sequences of AEB02044 for antibodies having amino acid sequences of AEB02044 for antibodies having amino acid sequences of AEB02044 for antibodies having amino acid sequences of AEB02044 for modification by substitution, deletion, addition and/or insertion of some amino acids), remedies for thrombocytopenia containing antibodies that can recognize amino acid sites of human Mpl from positions 126-274, and agents for increasing platelets containing the active ingredients as already specified for the thrombocytopenia. Such antibodies are extremely effective because they have high agonistic activity against antihuman Mpl antibody, and the activity is comparable or superior to that of human TPO (thrombopoietin) which is a natural ligand. The presents sequence represents a humanized single chain antibody, and the activity defined from the mouse anti-and an (or diabody) derived from the mouse anti-Mpl antibody (VB22B). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
